

TOOL 3.2: Contact Web

You can use this tool as a template (model). Our Contact Web will help you start thinking about what yours should look like and how you could use it. It can help to remind you who to contact when you have questions or need help with a patient and their barriers. Use this Contact Web as an example to help you draw your own if your program doesn't already have one. After you draw your own Contact Web, meet with your supervisor to see what else should go on your chart.
